

Fig. 1A

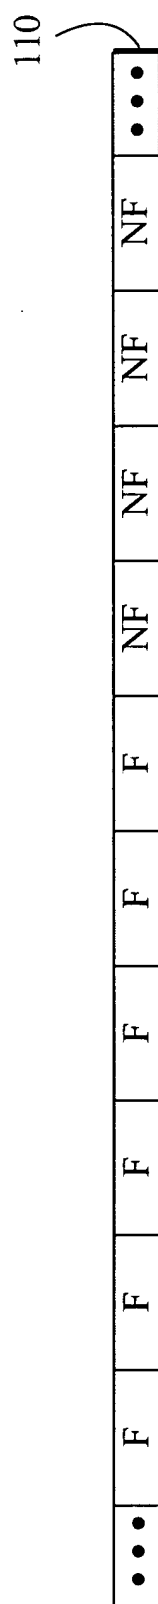

Fig. 1B

Start  
112

Standby card receives connection  
addition and deletion  
commands from active card 115

Standby card uses the LCN specified  
by the active card to add or  
delete connections 120

When active card fails, standby  
card compacts LCN database  
before going active 125

Standby card takes over  
active card role 130

End  
135
